

Westmoreland Sanctuary
NATURE CENTER & WILDLIFE PRESERVE

The Environmental Education Center

Our Current Space

On a cold winter day, what can you find in Westmoreland Sanctuary's Natural Science Museum?

A school group discussing forest ecology, interns strategizing how to manage invasive species, staff answering phone calls in their office, a family touring the upstairs museum exhibits, hikers using the bathrooms, and an array of animals getting their daily dose of exercise.

While we love bringing the community together to practice environmental stewardship in our cozy Museum, the cacophony of sounds can be distracting and we are limited by our space. As Westmoreland Sanctuary continues to grow our programs to accommodate more community members than ever before, we need additional space to continue providing you with the best possible services.

The New Building

The new Environmental Education Center will be a 40' x 60' one-story building with educational amenities and restrooms. The aesthetics of the new space will be consistent with the wooden, rustic feel of the Natural Science Museum, but this building will be designed with sustainability in mind! It will be located nearby the Museum so visitors can easily travel between both locations. See the sitemap below for preliminary designs.
